UNHCR WASH ORGANISATIONAL CAPACITY ASSESSMENT

- Capacity building of national public, private, or refugee-based WASH service providers is an essential element in ensuring there is a long-term durable strategy for WASH service provision in refugee settings. It should be carried out in parallel with activities to switch to appropriate and affordable low-cost WASH technologies for the setting, making WASH service provision as cost-effective as possible to facilitate handover.

- Capacity building activities should focus on reinforcing technical skills, ensuring the organisation has the financial and material resources (e.g. office furniture, computers, printers, waste collection trucks, containers, water pumps etc.) to carry out effective WASH programming, in addition to reinforcing administrative systems (finance, admin, logistics). Any interventions to hand over WASH service provision should be carried out slowly and carefully with continued support and capacity building. Once WASH services are handed over, UNHCR and WASH actors should continue to work with national regulatory authorities to ensure that the quality of services is being carried out to defined standards.

- This tool has been designed to help obtain a snapshot capacity of national public, private, or refugee-based WASH service providers and understand the type of interventions that can be carried out to build capacity. Please note that the list of questions is not exhaustive and is merely intended to focus attention on areas of potential organisational capacity support. Common sense should be used at all times and if there is a clear capacity building need that is not included on the sheet it should be noted in the additional comments section for support.

- The tool should be used to guide a conversation (approximately an hour long) with the most senior representatives of the organisation. It should be made clear that the aim of the tool is not to identify weaknesses within the organisation but to understand where the organisation can most benefit from additional support and strengthening.

- At the end of the tool, the results may be plotted on a radar plot (or simple bar chart) as follows..
